Tools : JBoss, Maven, SVN, SQL Developer, jQuery, git, Backbone.js, Angular.js, XCode, Eclipse

Education

B.S. in Computer Science, Brigham Young University, Provo UT - *Anticipated Graduation Dec 2013*

Experience

Team Lead, MTC; Provo UT — 2010-2013

I am in charge of development, and helping find the best environments for the projects I currently oversee. Using the JIRA system, I help our teams know what they need to do while giving them the freedom to do it creatively. I personally gained experience in many different environments and am comfortable learning new ones quickly.

Shift Manager, Boondocks Fun Center; Draper, UT — 2005-2006 and 2008-2010

I can manage people and assets. I was responsible for the entire park and all guests (up to 2000 at a time). I handled financials each night and managed a crew of 20-30. I participated in decision making for the park with General Management each month. I personally created and refined a cleaning system that is still used there today.

Full-time Missionary, LDS Church; Cape Town, RSA — 2006-2008

I know how to communicate and work with people. I was in leadership positions for 14 months while serving. I organized proselyting areas for large groups of missionaries.

Extras

WebMaster for BYU chapter of ACM

I am overseeing the rewrite of the acm.byu.edu website. Working closely with the ACM leadership, I help bring more value to our members and contributors by adding the best features to the website.

Games

I have a passion for old games and have begun creating basic HTML5 versions of some older games I love. Currently on my site I have links to Snake, Space Invaders and Mario. I love web development and continue to learn new web technologies.
